# Wireless sensors

A standardised, open and interoperable sensor solution

Introducing

**The Wireless sensor range, supports IEC 62386-104 and delivers DALI standard support over a Thread® wireless mesh network.**

Wireless microwave and PIR

**Wireless microwave and PIR** options provide the flexibility to **use the best sensing technology** for the application

Mounting and ingress protection

Wall, surface, recessed and **IP65**  
mounting options available.

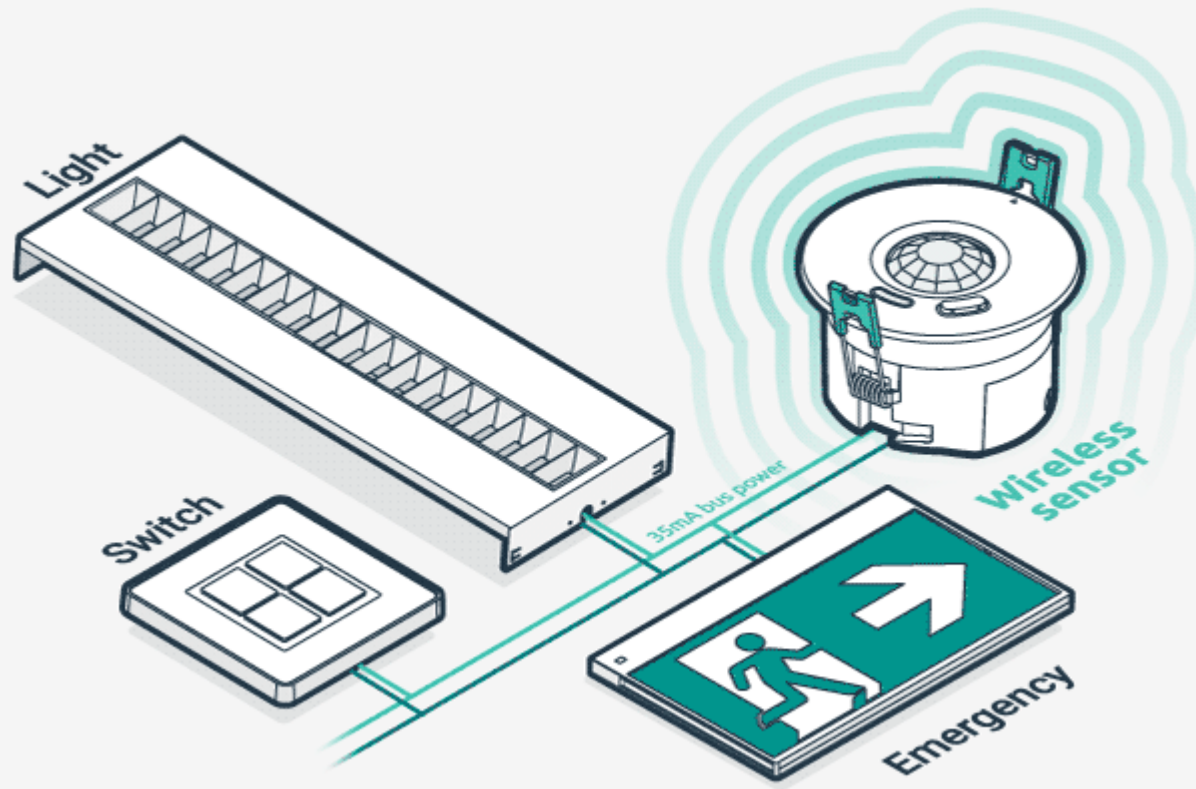

### Inbuilt wireless relay

## Options of a **10A mains rated** or **volt-free relay**

Can be used as an independently controlled wireless output by any compatible control system.

For improved interoperability, all inbuilt relays are compliant to IEC62386-208 (device type 7).

### Wireless DALI extension

Our Wireless sensors **support bridging to other DALI-2 devices**

With an inbuilt power supply, the wireless sensors can provide up to 35mA of bus power to other DALI devices.

## Wireless IR remote control

**Built in Infrared receivers** allow IR remote control of lighting, scenes and sequences

IR commands are relayed to compatible DALI-2 Application controllers

### Wellbeing

Make your building perform better with **CO<sub>2</sub>, temperature, VoCs, humidity and pressure sensors**, built into our Wireless sensors

## Wireless light level measurement

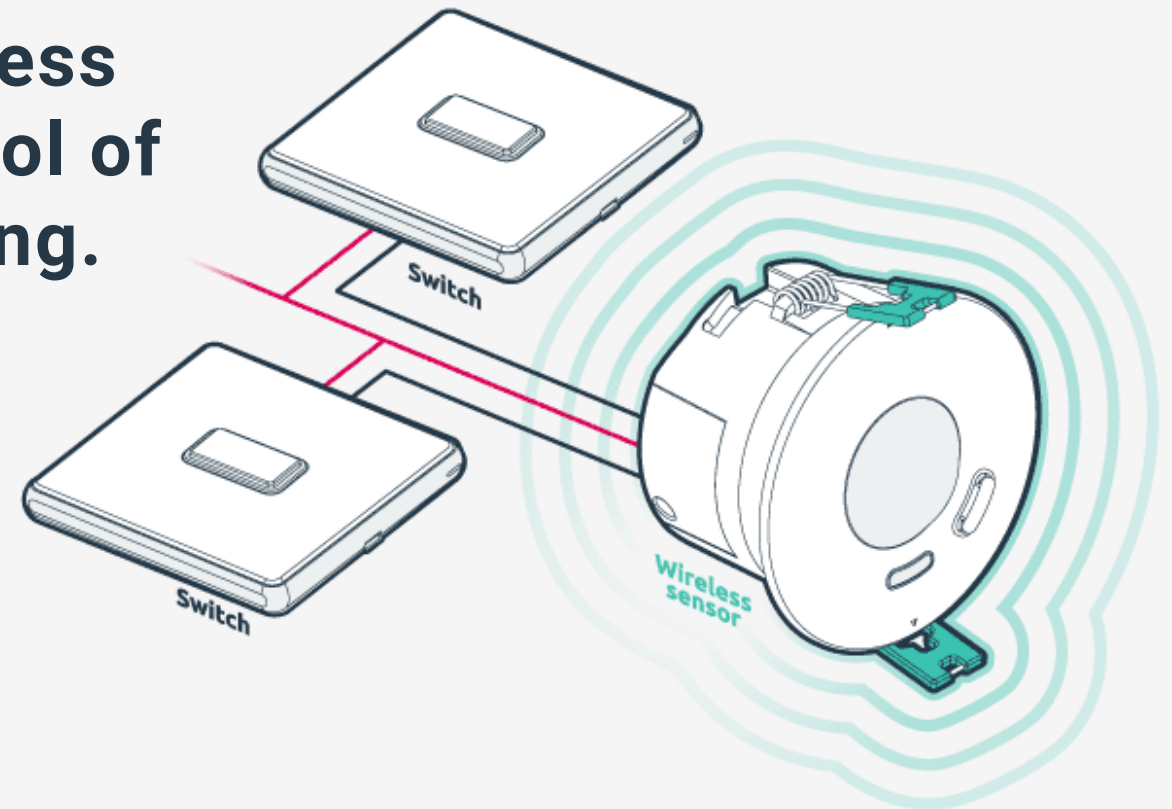

Internal light level sensors can **measure and report light level changes wirelessly** with support for IEC62386-304

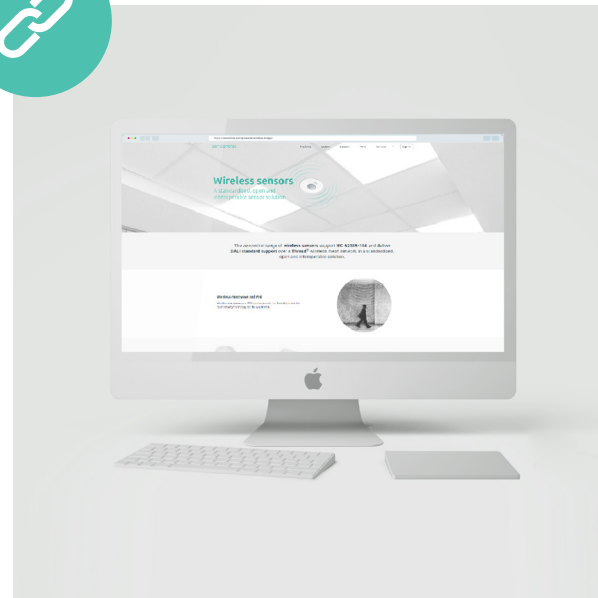

## Wireless switch

Each switch **provides a wireless input** to the system **for control of lights anywhere in the building.**

- Option of two mains rated switch inputs
- Users can connect standard switch types directly to the sensor
- Our wireless switches are compliant to IEC62386-301 and IEC62386-302
